

iAppConnector allows simple, two-way integration between iMIS and the applications you use every day--letting you spend less time managing your technology and more time on your core mission.

What iAppConnector Brings to You

iAppConnector is designed to exceed your system integration needs while being highly flexible, easy-to-use, and affordable.

- **Automate Connections** between apps by building Zaps, which are assembled using a combination of tasks. Complex workflows can be easily assembled as a sequence of triggers and actions.
- **Identify** the correct record and reduce the number of Zapier tasks required by combining functions.
- **Map** any Contact-related table in iMIS, including User-Defined fields, Activities, Relationships, and contact information such as addresses.
- **Create System-to-System Integrations** by connecting iMIS to another app at the system level, creating a single, company-wide connection.
- **Integrate with User Productivity Tools** such as Hubspot, Salesforce, Outlook, Gmail, Google Sheets, or Excel for imports or synchronize data in a spreadsheet—or an SMS sending tool.

iAppConnector is an effective tool for busy associations that use a variety of applications to run their operations.

iAppConnector connects you seamlessly to the more than 2,000 applications on the Zapier platform giving association users a single platform to configure your apps and manage all your workflows in one place.

a product of
ARMSTRONG

iAppConnector is a user-friendly, intuitive interface that allows end users to create and manage integrations and workflows. Integrations can be of two general types:

- System to System Bridges: iMIS as a whole is synchronized with another system.
- User Productivity Tools: The iMIS user's workflows are connected between the various apps (Microsoft Office, Google Apps, OneDrive, etc.) they use.

On Zapier, workflows (built from a series of steps) are called Zaps which can easily be connected together to create workflows between apps. iAppConnector allows you to assemble complex workflows so that a triggering event in one app can provoke a corresponding action in one or more apps.

Features	Bridge ¹	Plus	Enterprise
Free Installation	✓	✓	✓
Free configuration of required Zaps ^{1,2}	✓	\$ ⁵	✓
Management and monitoring of your Zapier Account	We Manage your Zapier account		Manage your own Zaps and account
